

## How it Works

Male Edge combines cutting edge technology with proven scientific theory, resulting in a penis enlarger that doesn't just look good, but is simple to use and guaranteed to work.

How? You ask. Well, like this...

### **The Action is in the Traction**

Here's where it gets technical.

Male Edge's patented penis enlarger harnesses the body's natural propensity for growth. Human skin has an incredible elastic capability. When the penis is under traction, cells divide and multiply and tissue increases.

Sounds painful? It isn't. The Male Edge penis enlarger is safe, painless and non-invasive.

Tissue expanders are commonly used in many types of reconstructive surgery and the medical profession widely recognizes the efficiency of traction to expand tissue. Limbs and digits have been extended using tissue expanding devices, and for centuries tribal cultures have traditionally elongated body parts including their lips, necks, ear lobes, noses and penises using long-term traction.

But the very latest studies indicate that traction increases cellular division because of a clever bit of biology: traction suppresses an inhibitor in the body which attempts to stop cellular multiplication.

With Male Edge, traction is applied to the penis for an extended period of time, ensuring that the cells in the entire penis are increased. The vascular vessels, urethra, corpus cavernosum and spongiosum, cutaneous cover, muscle and fasciae are all subject to proliferation.

That's all very well if you speak Latin, so let's put it in layman's terms:

By expanding skin tissue using a unique traction mechanism, Male Edge stimulates cell growth resulting in a longer, thicker penis.

Which is good news for men.

**100% effective**

A bold claim, we know. But it's a proven fact.

Male Edge produces microscopic and macroscopic changes in the penis. These alterations are permanent. Once your penis is enlarged, it will stay that way.

Our clinical trials have proven that all men who use Male Edge and follow our training programme have achieved an increase in penis length. Results showed a gain of 1.5 cm to 5 cm after just four months using the product.

And for men who have penile curvature, Male Edge has corrected the problem with a 50% to 90% degree of success.

No other method of penis enlargement, whether surgical or mechanical, has achieved these kinds of results, either in lengthening the penis or in penis curvature correction.

In fact, our independent clinical trials have shown that Male Edge produces an average 24% increase in penis length and 19% in penis girth.

Now that's impressive.
